

Invoice Date: 5/14/2026

Qty	Description		Price
	To install a 2" master valve by the backflow preventer to depressurize the irrigation		\$1,650.00
	main line to prevent future leaks due to system being very old and prone to leaks		
	due to constant high pressure. Will need to run 2 wires from irrigation controller		
	to backflow preventer. NOTE: It is strongly recommended that a master valve be		
	installed due to the high cost of leak detection service and due to likelihood of		
	future leaks because of old age of the irrigation system.		
	Labor, parts, and trench rental included in price		
Make all checks payable to Lizpa Landscaping, Inc.			
Thank you for your business!!		TOTAL	\$1,650.00
